Summary

Full stack engineer with 7 years of experience shipping features end to end across five SaaS products in financial decisioning, from PostgreSQL and Spring Boot REST APIs through the Angular and Vue interfaces customers use daily. Uses **Claude Code** daily and helped set up the team's agentic workflows, from shared project rules to agents running multi-step refactors and tests.

Experience

Provenir Remote
Senior Software Engineer *January 2020 - Present*

- **Technologies: TypeScript, JavaScript, Node.js, Angular, RxJS, Vue 3, Java, Spring Boot, PostgreSQL, Vitest, Maven, Docker, Jenkins, Claude Code, Cursor, GitHub Copilot**
- Built a standalone **TypeScript** / **Node.js** service that exports a client's full configuration to PDF as an async job, handling **1,000 page** documents with rendered visuals on every page.
- Designed and maintained **REST APIs** in **Spring Boot** over **PostgreSQL** for customer facing products and internal teams, negotiating contracts with the engineers consuming them.
- Rewrote the Decision Tree rendering path: trees with **thousands of nodes** load **7x faster** and stay lag free to view, scroll, and edit.
- Wrote unit and component tests in **Vitest** across the Angular and Vue front ends, covering the export and Decision Tree paths so regressions surfaced before release.
- Helped set up agentic development workflows with **Claude Code**: wrote the team's shared **CLAUDE.md** project rules, ran agents on multi-step refactors and test suites, and onboarded teammates, alongside daily use of **Cursor** and **GitHub Copilot**.
- Integrated the **Sisense** third party API into the decisioning platform, letting users chart and table large result sets in product instead of exporting to a separate BI tool.
- Built the front end for Insights Cloud and, with data scientists and designers, the Provenir AI model dashboards, exposing how data transforms through the pipeline and how client models scored.
- Ran release management for bi-weekly hotfix releases, triaging and fixing critical client reported bugs with customer facing teams.
- Mentored a handful of junior engineers and interns through code review and pair programming.

Rutgers University Piscataway, NJ
Software Engineer *January 2019 - January 2020*

- Developed a **React** app that rendered Rutgers bus data in **real time** by integrating the Google Maps and Transloc APIs.
- Built the front end of a university-wide user portal in **React** and **Bootstrap** against a **Flask** back end.
- Built a custom drag and drop quiz app in **Angular** that met **WCAG 2.1** standards, with LTI Canvas integration.
- Built back-end integration with Canvas LMS to populate student data in an advising app used to track advising sessions, notes, and student communication, including grade display and GPA calculation

Bessemer Trust Woodbridge, NJ
DevOps Engineer Intern *June 2019 - August 2019*

- Designed and scripted a **CI/CD pipeline** in **Jenkins** that automated server builds, removing manual effort.
- Implemented **AWS Lambda** scripts to automate backups of **EC2** instances.
- Automated server IP configuration for disaster recovery tests and the setup of CIS-CAT security scanning.

Skills

- **Languages**: TypeScript, JavaScript, Java, Python
- **Front-end**: Angular, RxJS, Vue 3, React, SCSS
- **Back-end & APIs**: Spring Boot, Node.js, Express, Flask, REST
- **Data**: PostgreSQL, MySQL, MongoDB
- **Testing**: Vitest
- **Infrastructure**: Docker, Jenkins, Maven, AWS (Lambda, EC2), Git
- **AI Tools**: Claude Code, Cursor, GitHub Copilot

Education & Certifications

Rutgers University - School of Engineering New Brunswick, NJ
B.S. in Computer Science Engineering, Cum Laude *May 2020*
AWS Certified Cloud Practitioner | Amazon Web Services *January 2025*
